Speech Communication 13 (1993) 481–482
North-Holland

Author index of Volume 13

Volume 13 (1993)

Aikawa, K., see **K. Katagishi** (3–4) 297–306
Alcantara, J.I., see **P.J. Blamey** (3–4) 453–461
Ambikairajah, E., M. Keane, A. Kelly, L. Kilmartin and **G. Tattersall,** Predictive models for speaker verification (3–4) 417–425
Bagshaw, P.C., An investigation of acoustic events related to sentential stress and pitch accents, in English (3–4) 333–342
Barlow, M., see **I. Booth** (3–4) 427–433
Blamey, P.J., G.J. Dooley, J.I. Alcantara, E.S. Gerin and **P.M. Seligman,** Formant-based processing for hearing aids (3–4) 453–461
Booth, I., M. Barlow and **B. Watson,** Enhancements to DTW and VQ decision algorithms for speaker recognition (3–4) 427–433
Brown, G.J., see **M.P. Cooke** (3–4) 391–399
Bruce, G. and **B. Granström,** Prosodic modelling in Swedish speech synthesis (1–2) 63– 73
Campbell, N., Automatic detection of prosodic boundaries in speech (3–4) 343–354
Chan, C., see **Q. Huo** (3–4) 307–313
Clermont, F., Spectro-temporal description of diphthongs in F_1–F_2–F_3 space (3–4) 377–390
Cohen, M.M., see **D.W. Massaro** (1–2) 127–134
Cooke, M.P. and **G.J. Brown,** Computational auditory scene analysis: Exploiting principles of perceived continuity (3–4) 391–399
Corazza, A., R. De Mori, R. Gretter and **G. Satta,** Language modeling using stochastic context-free grammars (1–2) 163–170
Cutler, A., R. Kearns, D. Norris and **D.R. Scott,** Problems with click detection: Insights from cross-linguistic comparisons (3–4) 401–410
Damper, R.I., see **K.P.H. Sullivan** (3–4) 441–452
De Mori, R., see **A. Corazza** (1–2) 163–170
Dooley, G.J., see **P.J. Blamey** (3–4) 453–461
Dutoit, T. and **H. Leich,** MBR-PSOLA: Text-To-Speech synthesis based on an MBE re-synthesis of the segments database (3–4) 435–440
Elliott, J.A., see **M.E. Forsyth** (3–4) 411–416
Fant, G., Some problems in voice source analysis (1–2) 7– 22
Flanagan, J.L., A.C. Surendran and **E.E. Jan,** Spatially selective sound capture for speech and audio processing (1–2) 207–222
Fletcher, J. and **A. McVeigh,** Segment and syllable duration in Australian English (3–4) 355–365
Forsyth, M.E., A.M. Sutherland, J.A. Elliott and **M.A. Jack,** HMM speaker verification with sparse training data on telephone quality speech (3–4) 411–416
Fox, R.A., see **I. Lehiste** (1–2) 149–154
Gauvain, J.-L., see **C.-H. Lee** (3–4) 263–279
Gerin, E.S., see **P.J. Blamey** (3–4) 453–461
Gong, Y. and **J.-P. Haton,** Plausibility functions in continuous speech recognition: The VINICS system (1–2) 187–196
Granström, B., see **G. Bruce** (1–2) 63– 73
Gretter, R., see **A. Corazza** (1–2) 163–170
Haton, J.-P., see **Y. Gong** (1–2) 187–196
Hess, W., see **B. Möbius** (1–2) 53– 61
Hiller, S., E. Rooney, J. Laver and **M. Jack,** SPELL: An automated system for computer-aided pronunciation teaching (3–4) 463–473
Hirose, H., see **S. Kiritani** (1–2) 23– 32
Hirose, K., Speech signal processing using optical method (1–2) 223–229
Hunt, A., Recurrent neural networks for syllabification (3–4) 323–332
Huo, Q. and **C. Chan,** The gradient projection method for the training of hidden Markov models (3–4) 307–313
Imagawa, H., see **S. Kiritani** (1–2) 23– 32
Jack, M., see **S. Hiller** (3–4) 463–473
Jack, M.A., see **M.E. Forsyth** (3–4) 411–416
Jan, E.E., see **J.L. Flanagan** (1–2) 207–222
Katagishi, K., H. Singer, K. Aikawa and **S. Sagayama,** Feature extraction using a matrix coefficient filter for speech recognition (3–4) 297–306
Keane, M., see **E. Ambikairajah** (3–4) 417–425
Kearns, R., see **A. Cutler** (3–4) 401–410
Kelly, A., see **E. Ambikairajah** (3–4) 417–425
Kilmartin, L., see **E. Ambikairajah** (3–4) 417–425
Kiritani, S., H. Hirose and **H. Imagawa,** High-speed digital image analysis of vocal cord vibration in diplophonia (1–2) 23– 32
Laver, J., Repetition and re-start strategies for prosody in text-to-speech conversion systems (1–2) 75– 85
Laver, J., see **S. Hiller** (3–4) 463–473

Elsevier Science Publishers B.V.

Lee, C.-H., J.-L. Gauvain, R. Pieraccini and **L.R. Rabiner,** Large vocabulary speech recognition using subword units (3–4) 263–279
Lehiste, I. and **R.A. Fox,** Influence of duration and amplitude on the perception of prominence by Swedish listeners (1–2) 149–154
Leich, H., see **T. Dutoit** (3–4) 435–440
McVeigh, A., see **J. Fletcher** (3–4) 355–365
Mariani, J.J., Automated voice dictation in French (1–2) 171–185
Massaro, D.W. and **M.M. Cohen,** Perceiving asynchronous bimodal speech in consonant-vowel and vowel syllables (1–2) 127–134
Möbius B., M. Pätzold and **W. Hess,** Analysis and synthesis of German F_0 contours by means of Fujisaki's model (1–2) 53– 61
Norris, D., see **A. Cutler** (3–4) 401–410
Ohala, J.J., Sound change as nature's speech perception experiment (1–2) 155–161
Pätzold, M., see **B. Möbius** (1–2) 53– 61
Pieraccini, R., see **C.-H. Lee** (3–4) 263–279
Pisoni, D.B., Long-term memory in speech perception: Some new findings on talker variability, speaking rate and perceptual learning (1–2) 109–125
Pols, L.C.W. and **R.J.J.H. van Son,** Acoustics and perception of dynamic vowel segments (1–2) 135–147
Rabiner, L.R., see **C.-H. Lee** (3–4) 263–279
Rao, P.V.S., VOICE: An integrated speech recognition synthesis system for the Hindi language (1–2) 197–205
Rooney, E., see **S. Hiller** (3–4) 463–473
Rossi, M., A model for predicting the prosody of spontaneous speech (PPSS model) (1–2) 87–107
Sagayama, S., see **K. Katagishi** (3–4) 297–306
Sagayama, S., see **H. Singer** (3–4) 315–322
Samouelian, A., see **J. Song** (3–4) 287–295
Satta, G., see **A. Corazza** (1–2) 163–170
Schiel, F., A new approach to speaker adaptation by modelling pronunciation in automatic speech recognition (3–4) 281–286
Schroeder, M.R., A brief history of synthetic speech (1–2) 231–237
Scott, D.R., see **A. Cutler** (3–4) 401–410
Seligman, P.M., see **P.J. Blamey** (3–4) 453–461
Shirai, K., Estimation and generation of articulatory motion using neural networks (1–2) 45– 51
Singer, H., see **K. Katagishi** (3–4) 297–306
Singer, H. and **S. Sagayama,** Suprasegmental duration control with matrix parsing in continuous speech recognition (3–4) 315–322
Song, J. and **A. Samouelian,** A robust speaker-independent isolated word HMM recognizer for operation over the telephone network (3–4) 287–295
Stevens, K.N., Modelling affricate consonants (1–2) 33– 43
Stevens, K.N., Models for the production and acoustics of stop consonants (3–4) 367–375
Sullivan, K.P.H. and **R.I. Damper,** Novel-word pronunciation: A cross-language study (3–4) 441–452
Sundberg, J., How can music be expressive? (1–2) 239–253
Surendran, A.C., see **J.L. Flanagan** (1–2) 207–222
Sutherland, A.M., see **M.E. Forsyth** (3–4) 411–416
Tattersall, G., see **E. Ambikairajah** (3–4) 417–425
Van Son, R.J.J.H., see **L.C.W. Pols** (1–2) 135–147
Watson, B., see **I. Booth** (3–4) 427–433
